

## Test Results of Document FRC and Data FRC

### Document FRC (FRD Series)

In accordance with the Japanese Industrial Standards (JIS S 1037: 1998), a newspaper is placed inside while the cabinet is subjected to fire testing for no less than 1 hour. Externally, the temperature is raised to 1000°C and monitored internally at 115.5°C. This is substantially lower than the upper temperature limit of 180°C for paper document protection filing cabinets. Upon test completion, the newspaper is still fully legible with no change in colour.

### Data FRC and Document FRC (FRD Series) Data Drawer

In accordance with the Japanese Industrial Standards (JIS S 1037: 1998), a 3 1/2 inch computer diskette is placed in the bottom drawer while the cabinet is subjected to fire testing for no less than 1 hour. Externally, the temperature is raised to 1000°C and monitored internally at 43.8°C. This is substantially lower than the upper temperature limit of 52°C for disc-protection filing cabinets. Upon test completion, the disc is found intact with the stored data being fully accessible.

## Product Features of Document FRC (FRD Series and Data FRC (DPC-180)

### Document FRC (FRD Series)

#### Independent Computer Diskette Storage

The FRD Series feature independent storage for diskettes. Configuration of diskette storage can be adjusted to suit personal requirements.

#### Independent Locking System

Each drawer is equipped with an individual locking system.

#### Automatic Locking

Automatic locking is triggered when the drawer is closed lightly.

#### High Security Keys

Cabinets are supplied with high security keys.

### Data FRC (DPC-180 Media Cabinet)

#### High Security Keys

Cabinets are supplied with high security keys.

#### Moisture Resistant

Internal moisture absorbant insert fitted to door

DPC-180 Media Cabinet
